Designed and printed for young explorers everywhere.
Made with love in Australia.

THIS BOOK BELONGS TO:

ARTIST NAME

Get ready to colour 50 minibeast wonders!

TOP COLOURING TIPS!

1. Put a Blank Sheet Behind Your Page
   When using juicy markers, place a scrap sheet behind your drawing to keep the next page perfectly clean!

2. Start Light, Then Go Dark
   Colour lighter shades first, then layer darker tones on top for amazing depth and pop.

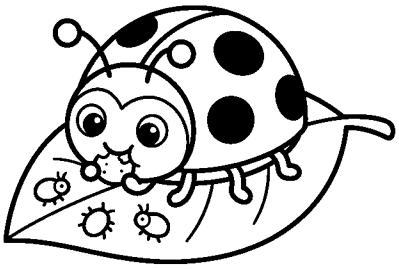

3. Mix Your Art Tools
   Try combining crayons, coloured pencils, and markers together on the same minibeast for fun textures.

4. There Are No Mistakes In Art!
   Make your minibeasts any colour you want. Purple ladybirds and rainbow snails are awesome!

MY COLOUR TEST PALETTE

Test your pencils, markers, and crayons here before colouring your minibeasts!

MY EXPLORER PLEDGE:

"I promise to have fun,
make this book my own,
and be proud of every
drawing I colour!"

_____

ARTIST SIGNATURE

Ladybirds can eat thousands of tiny aphids in their lifetime!

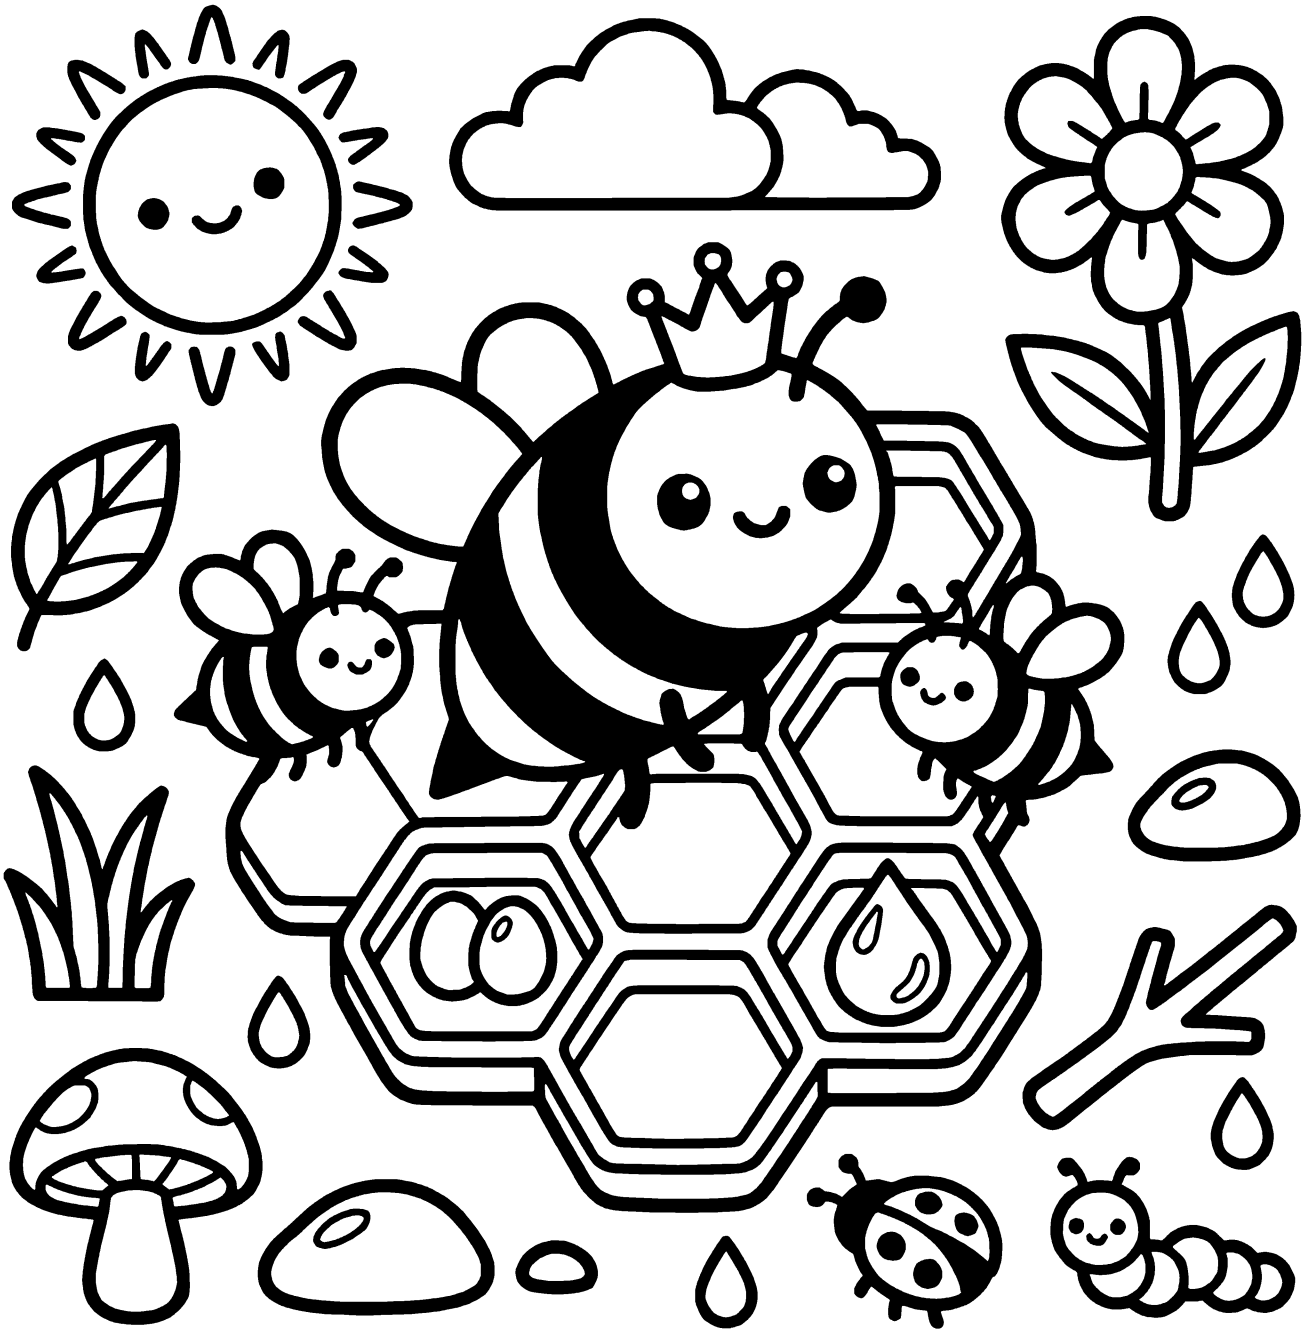

A ladybird's bright spots tell birds: I taste yucky!

A honeybee can visit up to 100 flowers on one trip!

Honeybees do a waggle dance to show friends where flowers are.

Each honeybee hive has one queen bee who lays all the eggs.

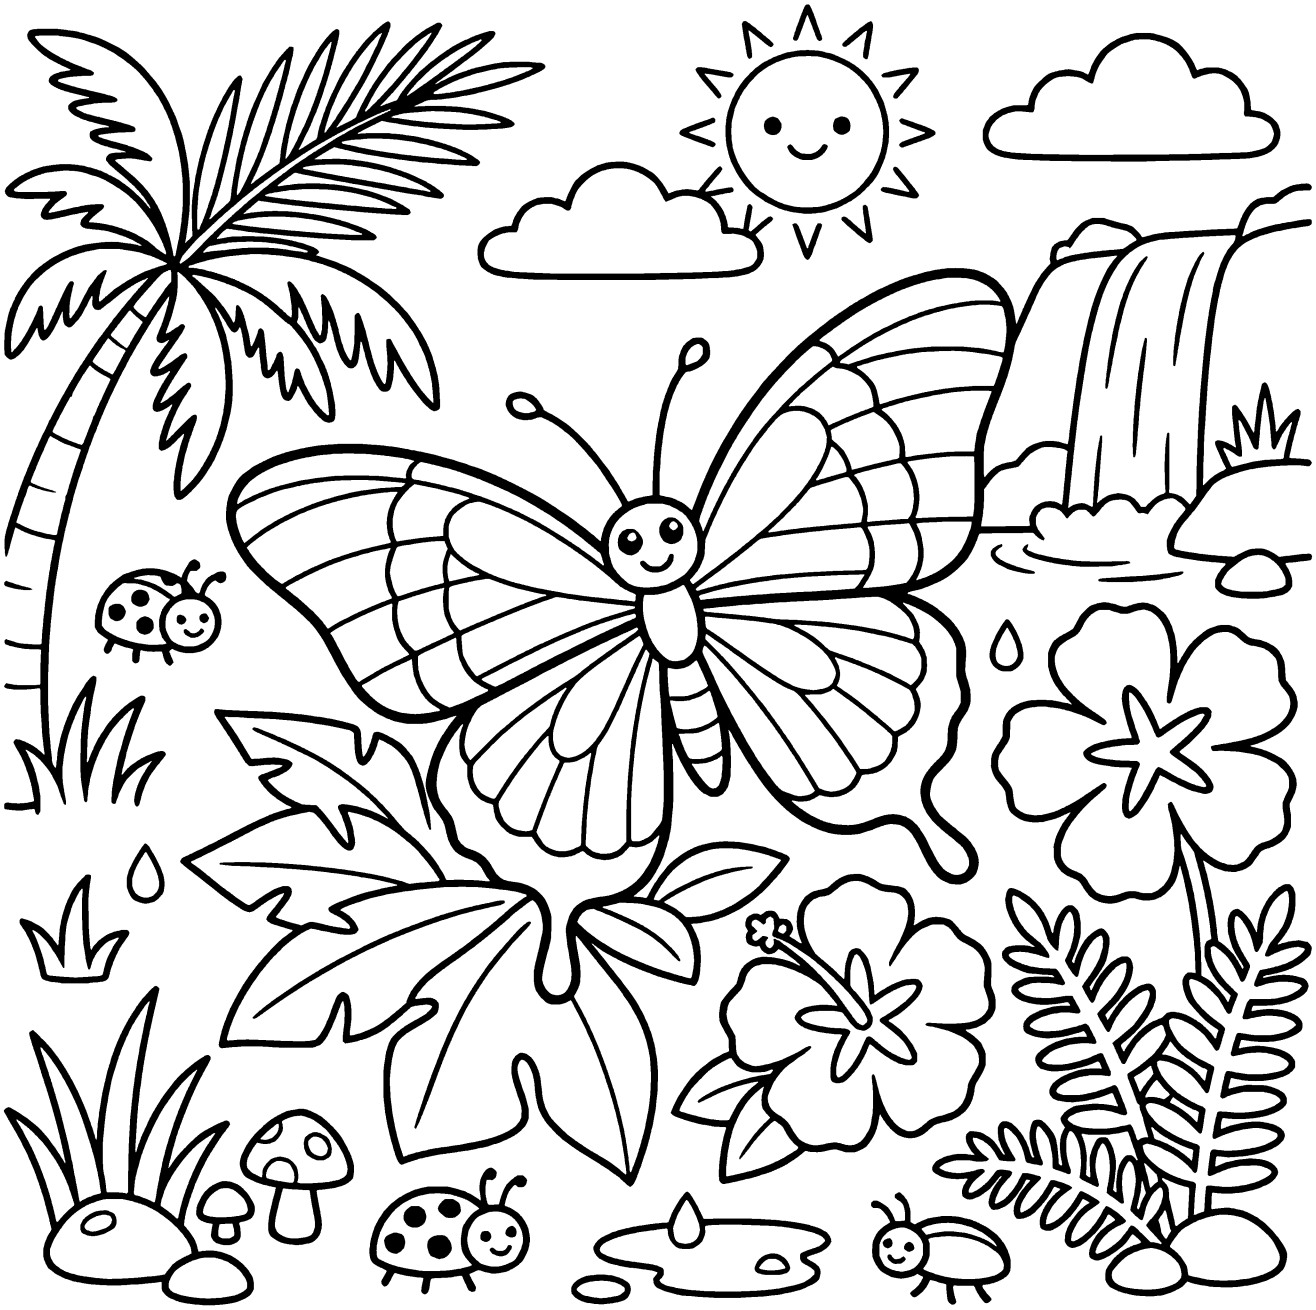

Butterflies taste their food with their feet!

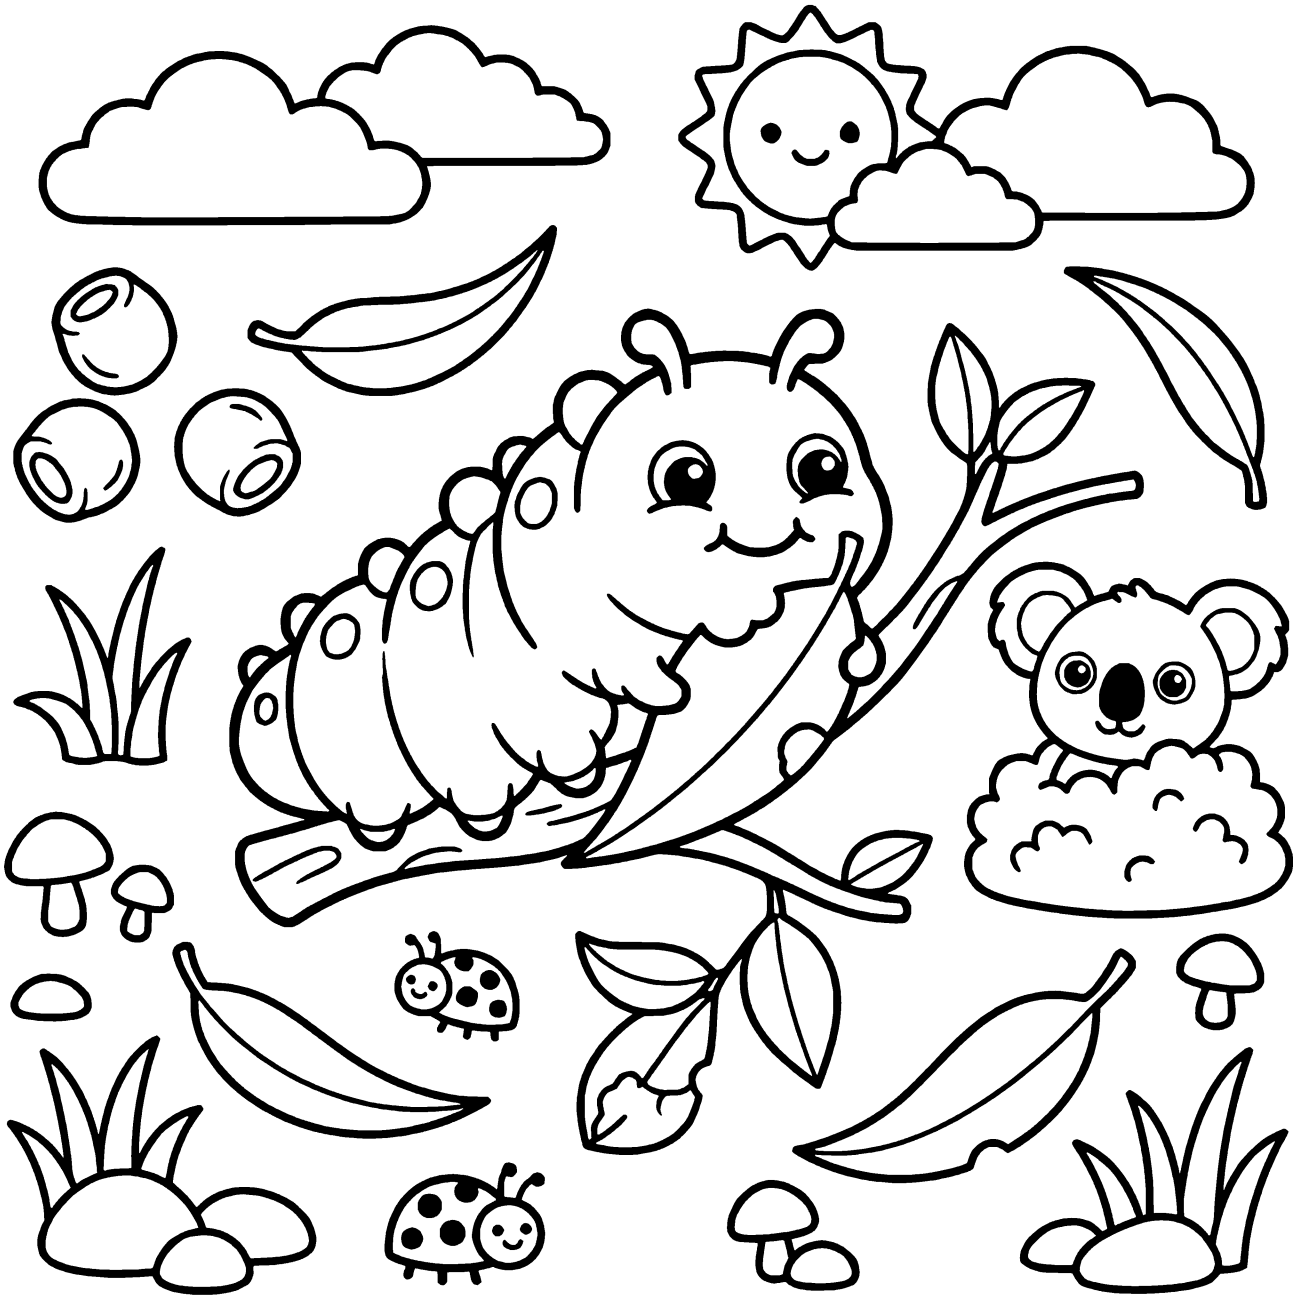

A caterpillar sheds its skin about five times as it grows.

Inside a chrysalis, a caterpillar turns into a butterfly.

The bright blue Ulysses butterfly lives in tropical Queensland.

Emperor gum moth caterpillars munch on gum leaves all day.

An ant can carry many times its own body weight!

Ants live together in nests with lots of busy rooms.

Bull ants are Aussie ants with big eyes and big jaws.

Dragonflies can fly forwards, backwards and even hover!

Fireflies make their own light to talk to their friends.

Glow-worms light up Australian caves like tiny stars.

Christmas beetles come out in the Aussie summer, near Christmas!

Rainbow stag beetles shine green, gold and purple.

Dung beetles roll balls of poo bigger than themselves!

Jewel beetles shine like little gemstones in the sun.

A weevil is a beetle with a long nose called a snout.

Grasshoppers hear with ears on their tummies!

Crickets sing by rubbing their wings together.

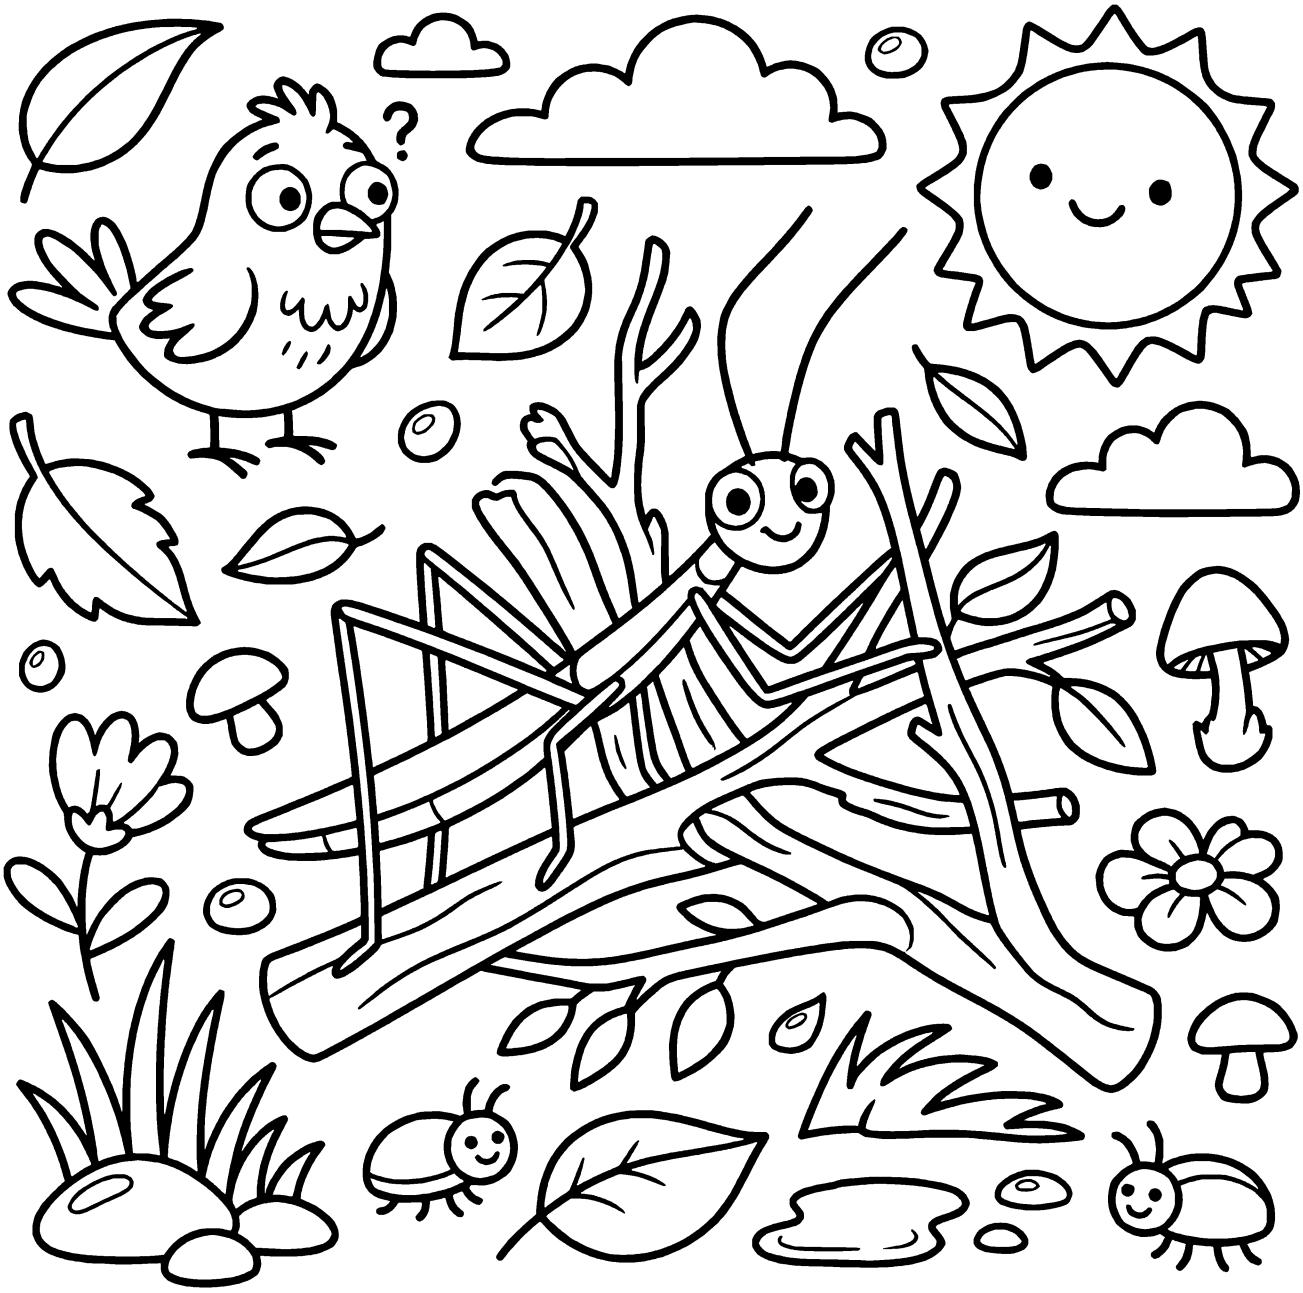

Katydids look just like leaves, so birds can't spot them.

Green grocer cicadas are some of the loudest insects on Earth.

A praying mantis can turn its head to look over its shoulder.

Stick insects hide by looking just like twigs.

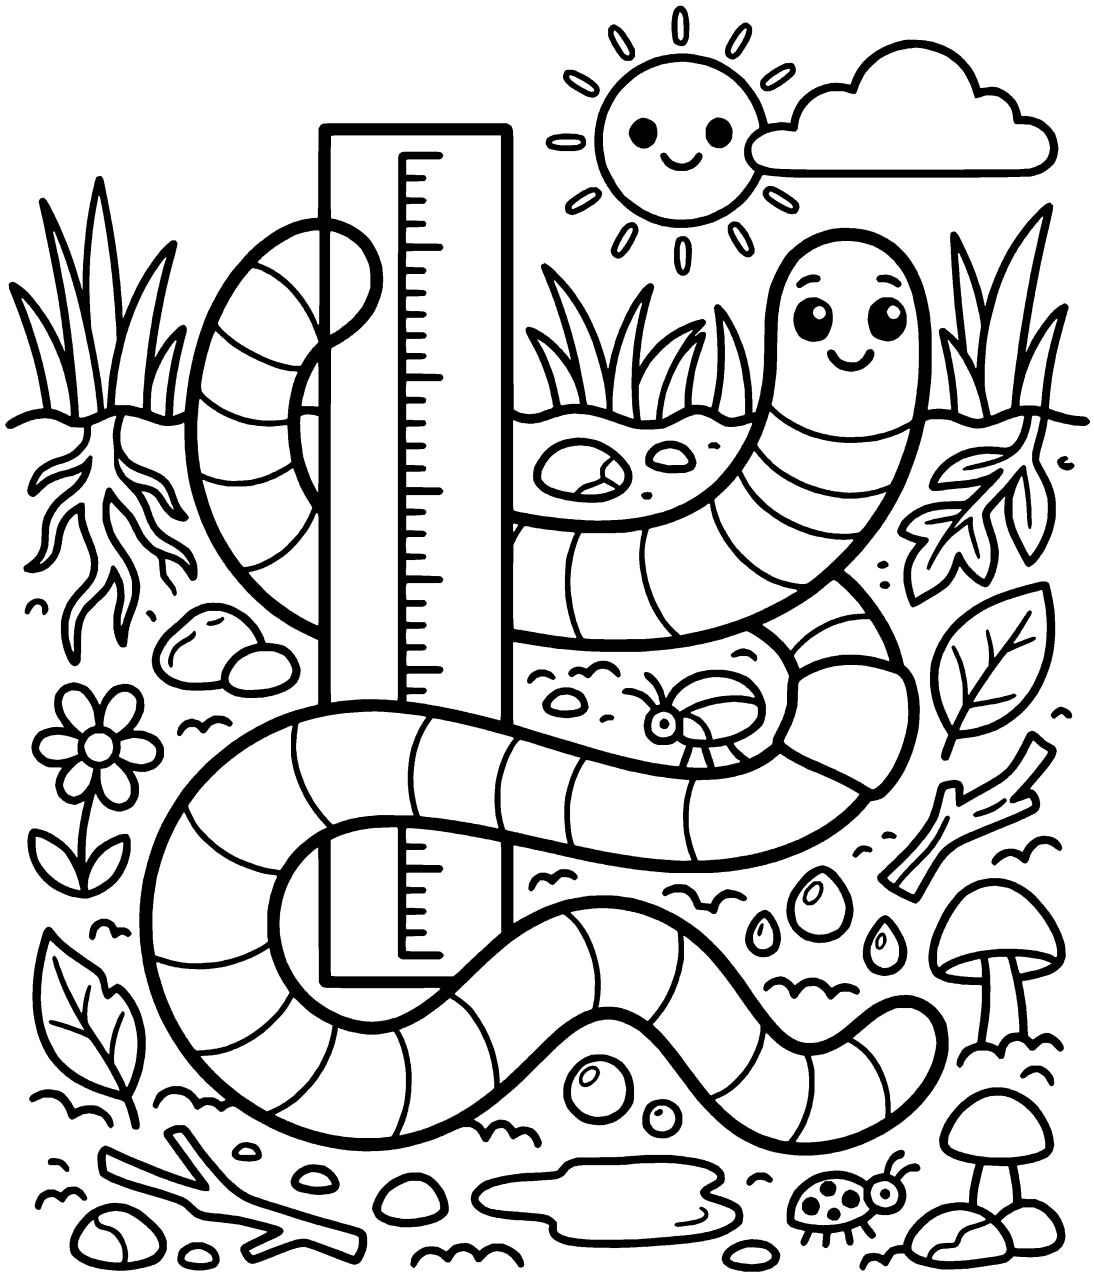

A snail carries its shell home everywhere it goes.

Snails glide along on a slippery trail of slime.

Earthworms have no eyes, but they can sense light.

Australia's giant Gippsland earthworm can grow over a metre long!

Spiders are not insects. They have eight legs!

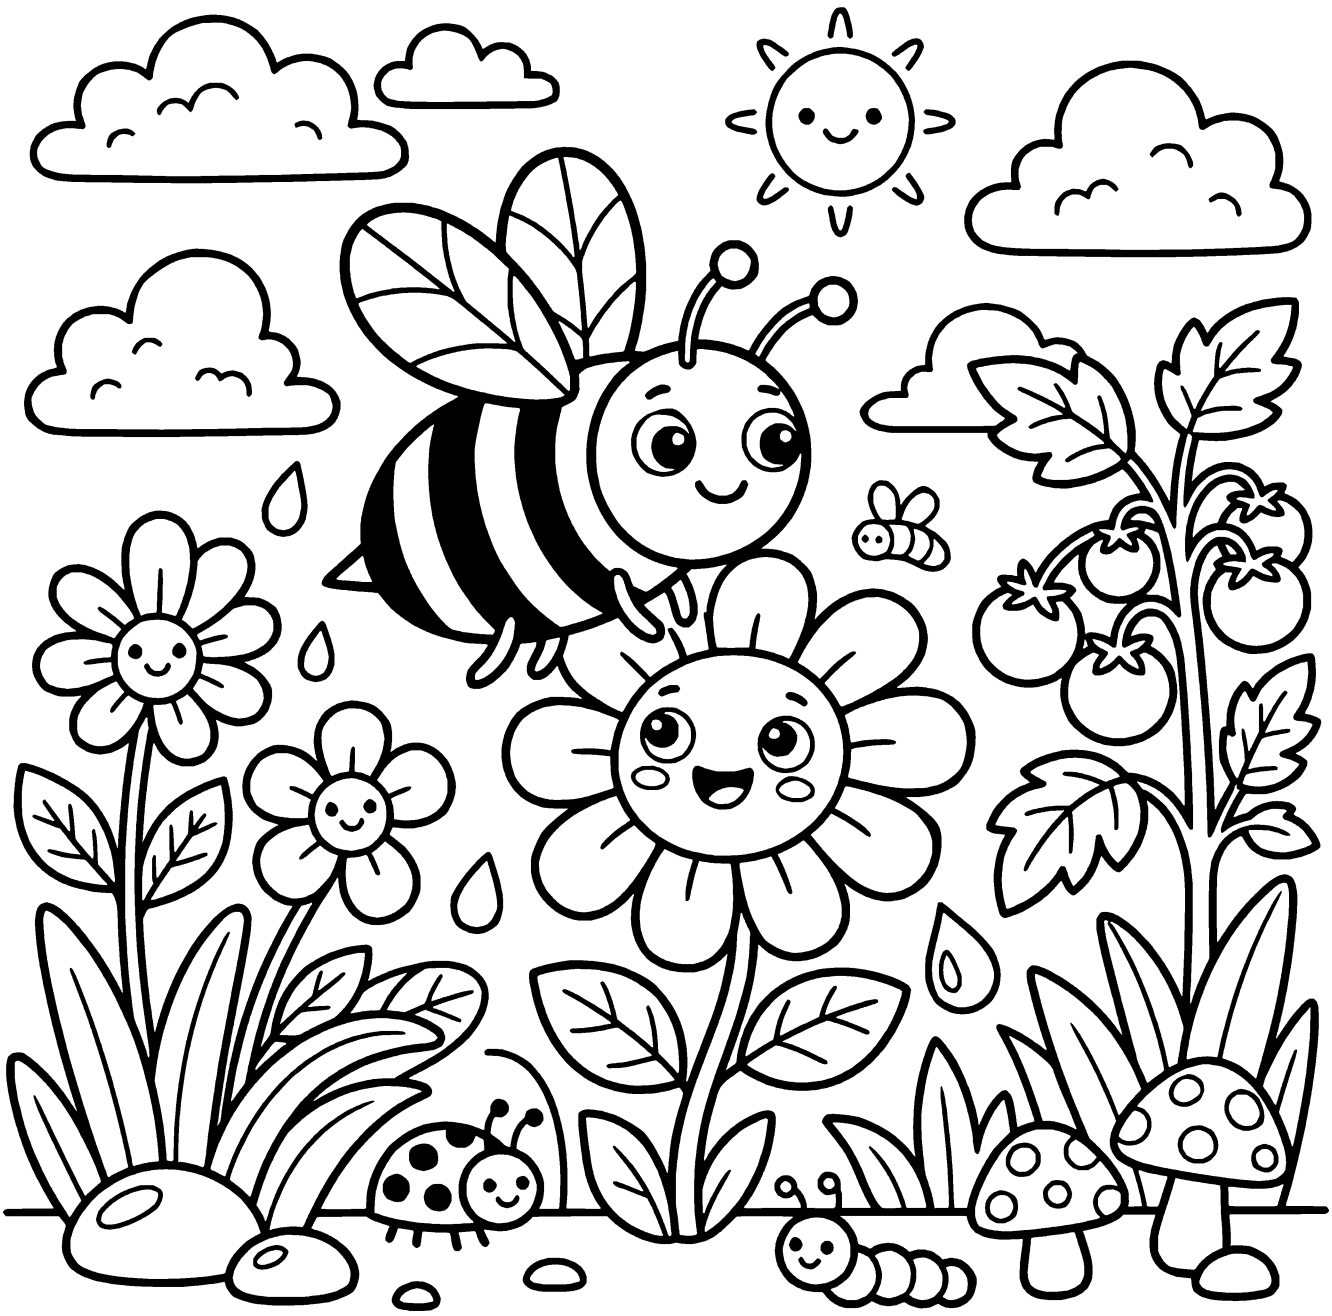

Spider silk is stronger than steel of the same thickness.

Huntsman spiders are big and fast, and love hiding under bark.

Tiny peacock spiders dance and wave their bright fans.

Blue-banded bees are Aussie bees with bright blue stripes.

Some Australian native bees have no sting at all!

Leaf-cutter bees cut round pieces of leaf to build their nests.

Most moths fly at night and have fluffy, feathery antennae.

Bogong moths fly hundreds of kilometres to cool mountain caves.

Termites build giant mud mounds in Australia's north.

Centipede means 100 legs, but no centipede has exactly 100!

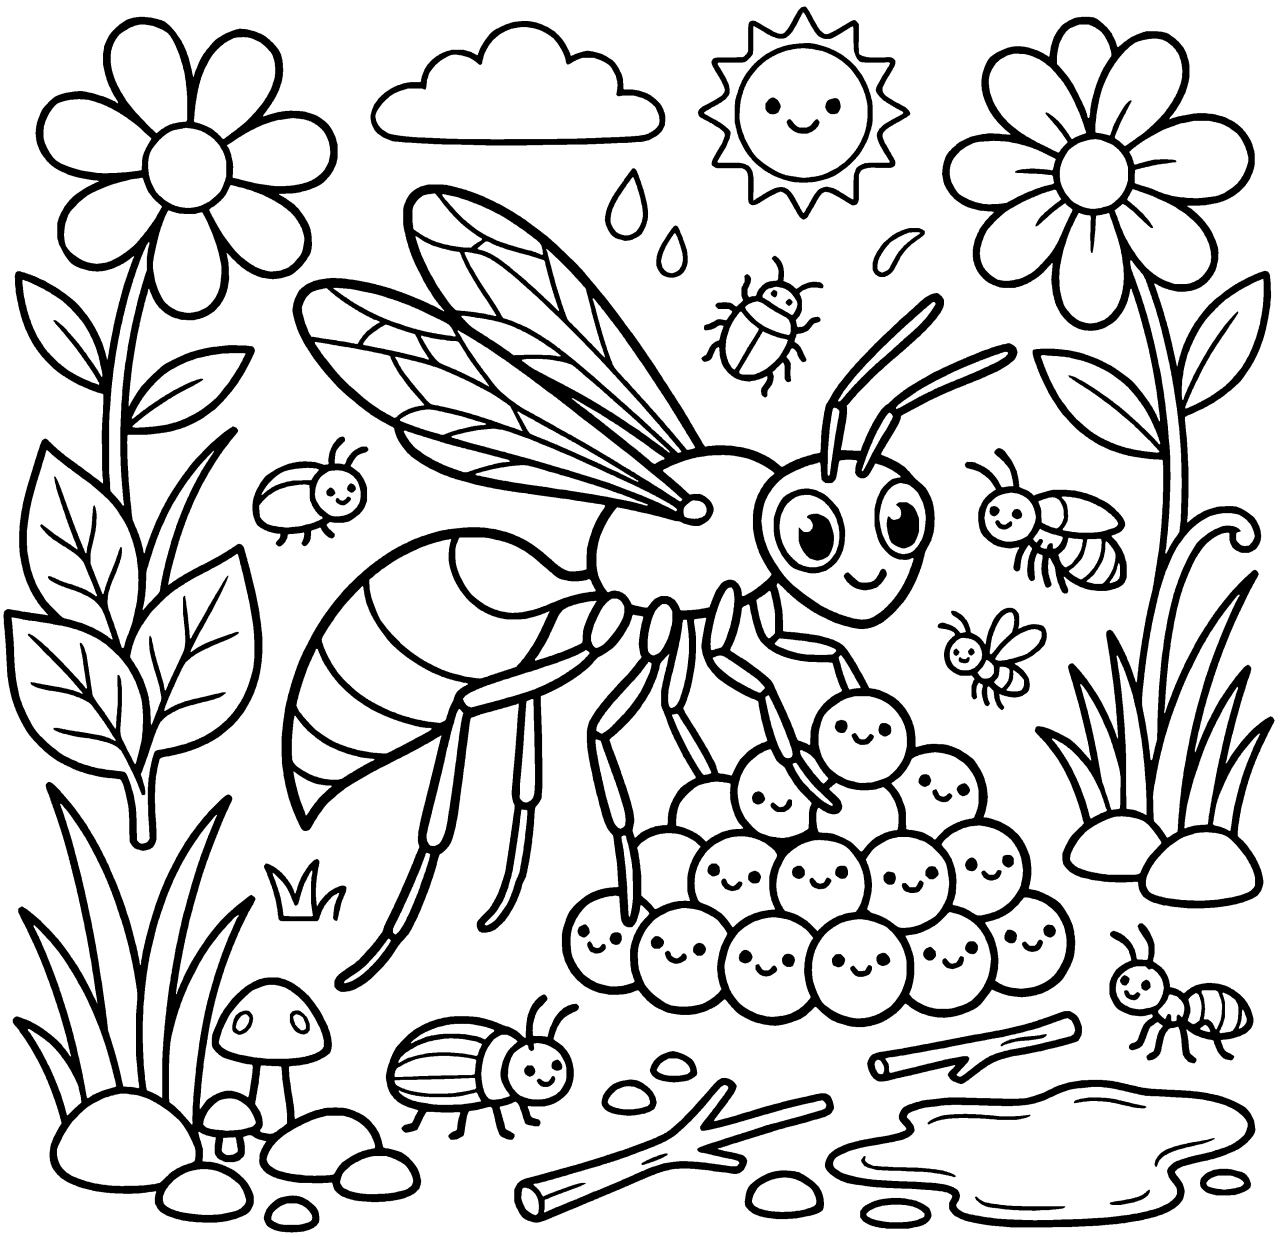

Millipedes have two pairs of legs on most body parts.

Slaters roll into a tight ball when they feel scared.

Water striders can walk on top of the water!

Mud dauber wasps build nests out of tiny balls of mud.

Giant burrowing cockroaches can live for about ten years!

Lacewings have see-through wings that look like lace.

Every insect has six legs and three body parts.

Thanks for exploring the wonderful world of minibeasts!
